

UTHSA partnered with Zauron to identify ~\$1.8M in missed value from 529 patients

Zauron’s algorithmic safety net was deployed at UT Health San Antonio to detect high value, commonly missed disease. Zauron found **174 patients with vertebral fractures & 355 with aortic calcifications** out of ~3000 assessed, enabling UTHSA to better treat their patients & capture ~\$1.8M in Medicare Advantage reimbursements.

UTHSA now uses Zauron’s AI technology to perform weekly, automated audits that enable more effective, targeted Peer Review of high probability false negatives that can impact patient lives and yield high value revenue capture.

Zauron Guardian

-  Improve patient care & safety
-  Increase revenue capture
-  Meet Peer Review mandates

The University of Texas Health Science Center at San Antonio is a top ranked clinical & research institute with 60 degree & certificate programs and \$360M in annual research awards. It relentlessly pursues excellence in patient care, research, education, & community service by providing care during 2.6M annual patient visits.
