

Zauron's Report Card biometric feedback tool enables radiologists to learn & improve their detection skills

UT Health San Antonio partnered with Zauron to evaluate the value of **Report Card**, a tool which provides biometric feedback to radiologists in the form of visual gaze heat maps, along with performance metrics summarizing radiologist speed, attention, & clinical impression utility.

As shown in a **2024 JACR publication** from our randomized, controlled longitudinal clinical trial, radiologists who received Report Card feedback exhibited a **39% improvement** in detecting suspicious nodules compared to the control group.

Medical systems can deploy Zauron Report Card to help current radiologists improve their skills and to evaluate candidate radiologists before making critical hiring decisions that impact patient lives.

Zauron Report Card

-  Continuously improve
-  Protect patient health
-  Enhance candidate evaluation
-  Save money on hiring mistakes

UT Health
San Antonio

The University of Texas Health Science Center at San Antonio is a top ranked clinical & research institute with 60 degree & certificate programs and \$360M in annual research awards. It relentlessly pursues its mission of excellent patient care, research, education, & community service by providing care during 2.6M annual patient visits.
